

Build fast. Launch faster.

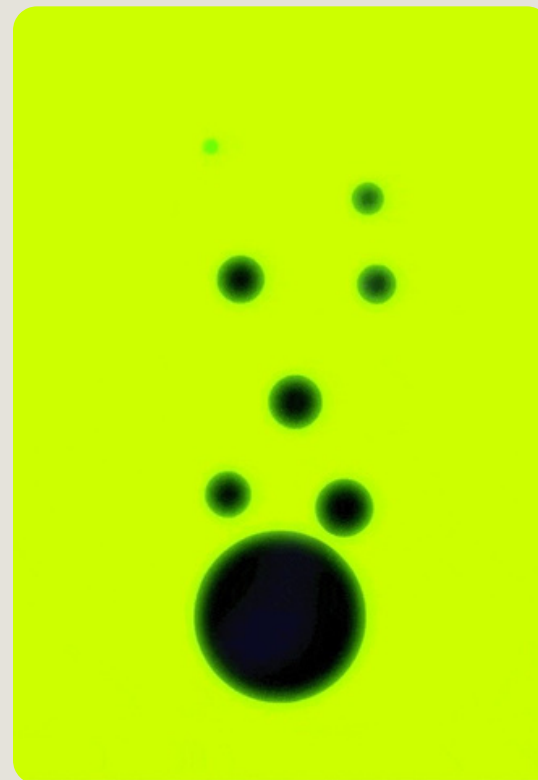

sabberrahman.contact@gmail.com

launchfast.cloud

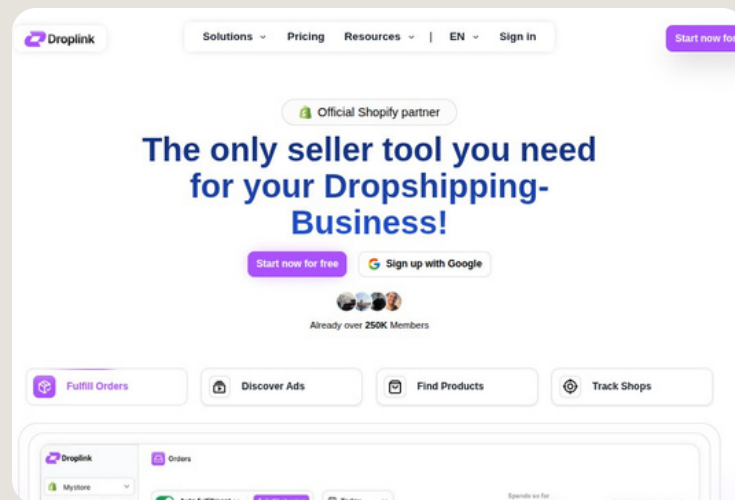

LaunchFast

End-to-end software solutions for startups.

We build scalable web and mobile products with AI integrations, automation, and the backend systems that support real growth. From first idea to production-grade launch.

We build software and digital products, from first idea to scalable system.

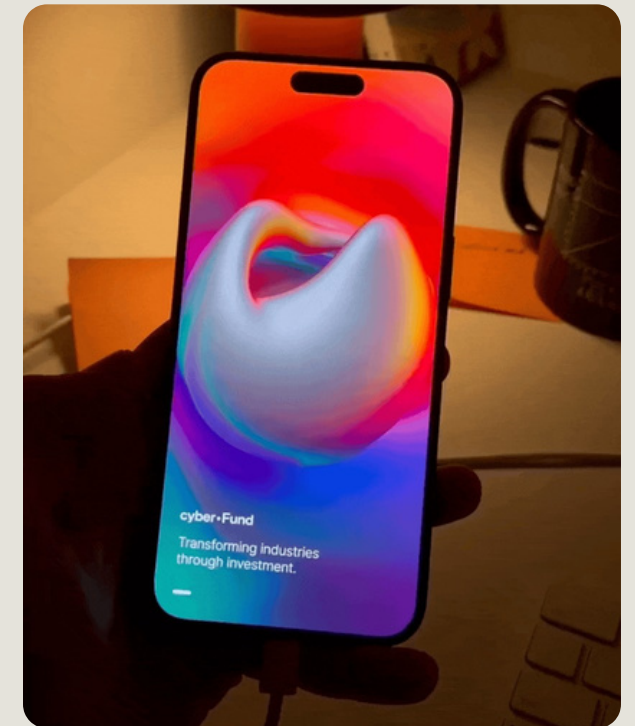

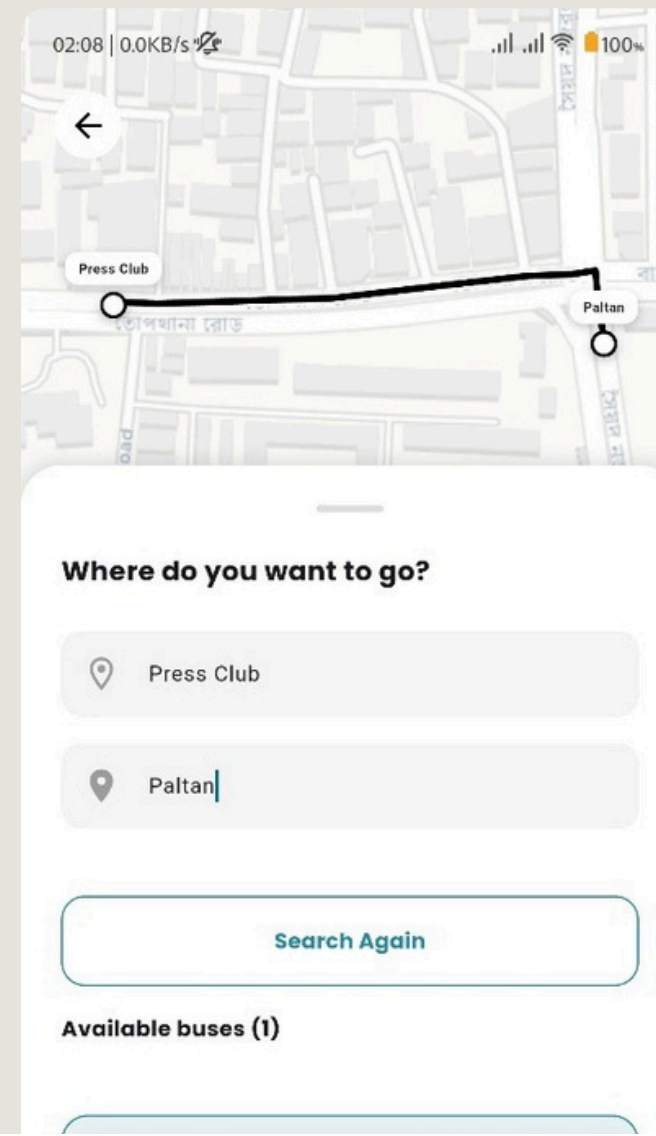

Backend & APIs

Node.js and Go backends with RESTful and GraphQL APIs, microservices, and secure auth.

Web & Mobile

React, Next.js, and Flutter apps built for performance, SEO, and real user scale.

GenAI & Automation

AI integrations and workflow automation that remove friction and drive measurable productivity gains.

LaunchFast

We take full ownership of your product, from brief to production. No handoffs. No gaps. Just one senior team delivering end to end. This is how we work.

Find trusted professionals near you

Your trusted network, simplified

Choose a category What service are you looking for?

Popular Categories

 Dog Walking  Gardening  Accounting  Electricians  Design & Web  Heavy Lifting  General Builders  Lawn Mowing

The brief

QuickHire is a location-driven hiring marketplace where employers publish openings and attract nearby candidates. The platform handles job posting, company profiles, applications, guest access, and public candidate tracking. The architecture is ready to expand into geo-based lead distribution, credit-based unlocks, and subscription monetization.

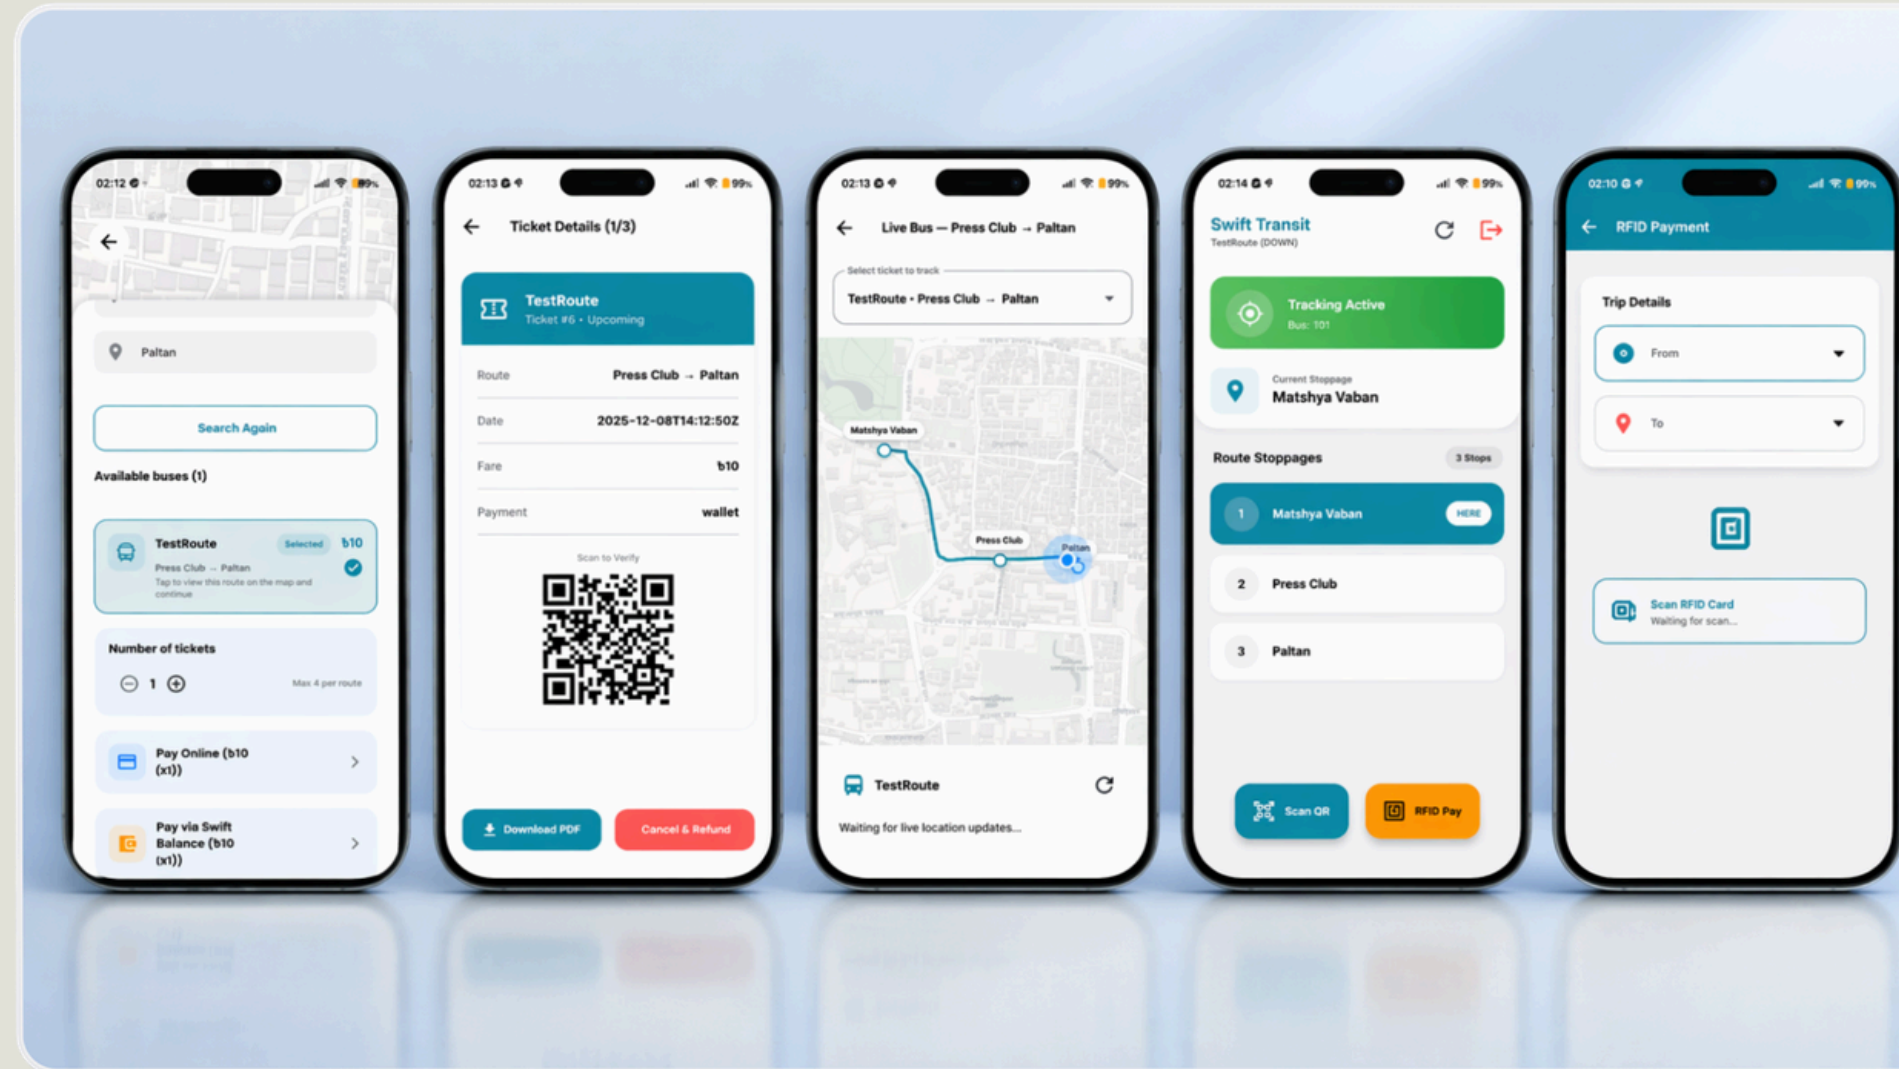

Services

Full-stack development
React + TypeScript frontend
Node.js / Express backend
PostgreSQL database

Guest access and quick apply flows
Monetization-ready architecture

Swift Transit

Swift Transit is a full transit operations ecosystem built for modern bus networks. It connects passengers, bus drivers, fleet owners, and administrators through web apps, mobile apps, real-time GPS tracking, digital ticketing, and operational dashboards.

Client

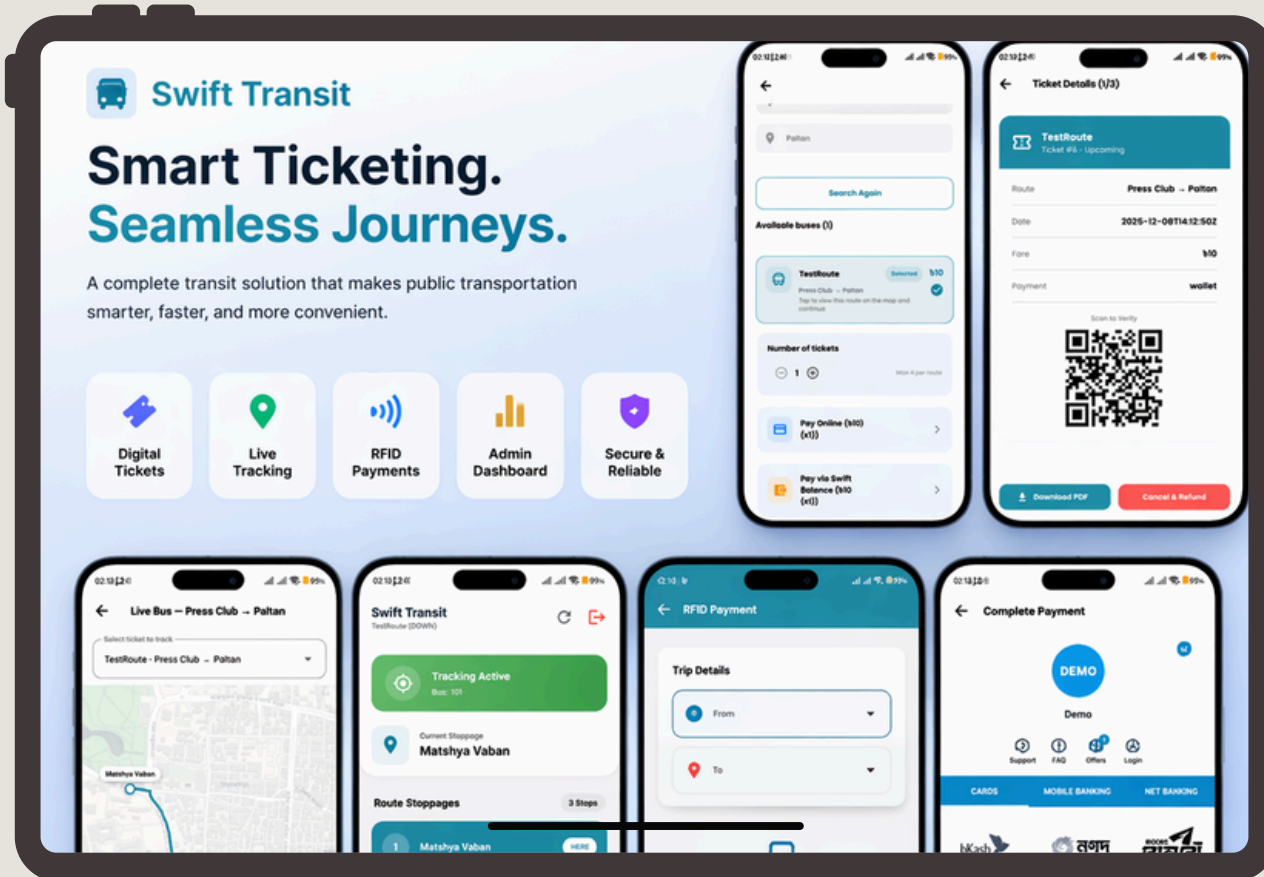

DIU Transit BD

Project

transit operations ecosystem

Date

2025

The brief

Swift Transit is a real-time transit platform that connects passengers, drivers, and operators in one system. Users can discover routes, track buses live, and buy digital tickets, while drivers validate passengers and stream GPS data. The platform combines live tracking, QR ticketing, payments, and fleet management into a scalable, production-ready system.

Services

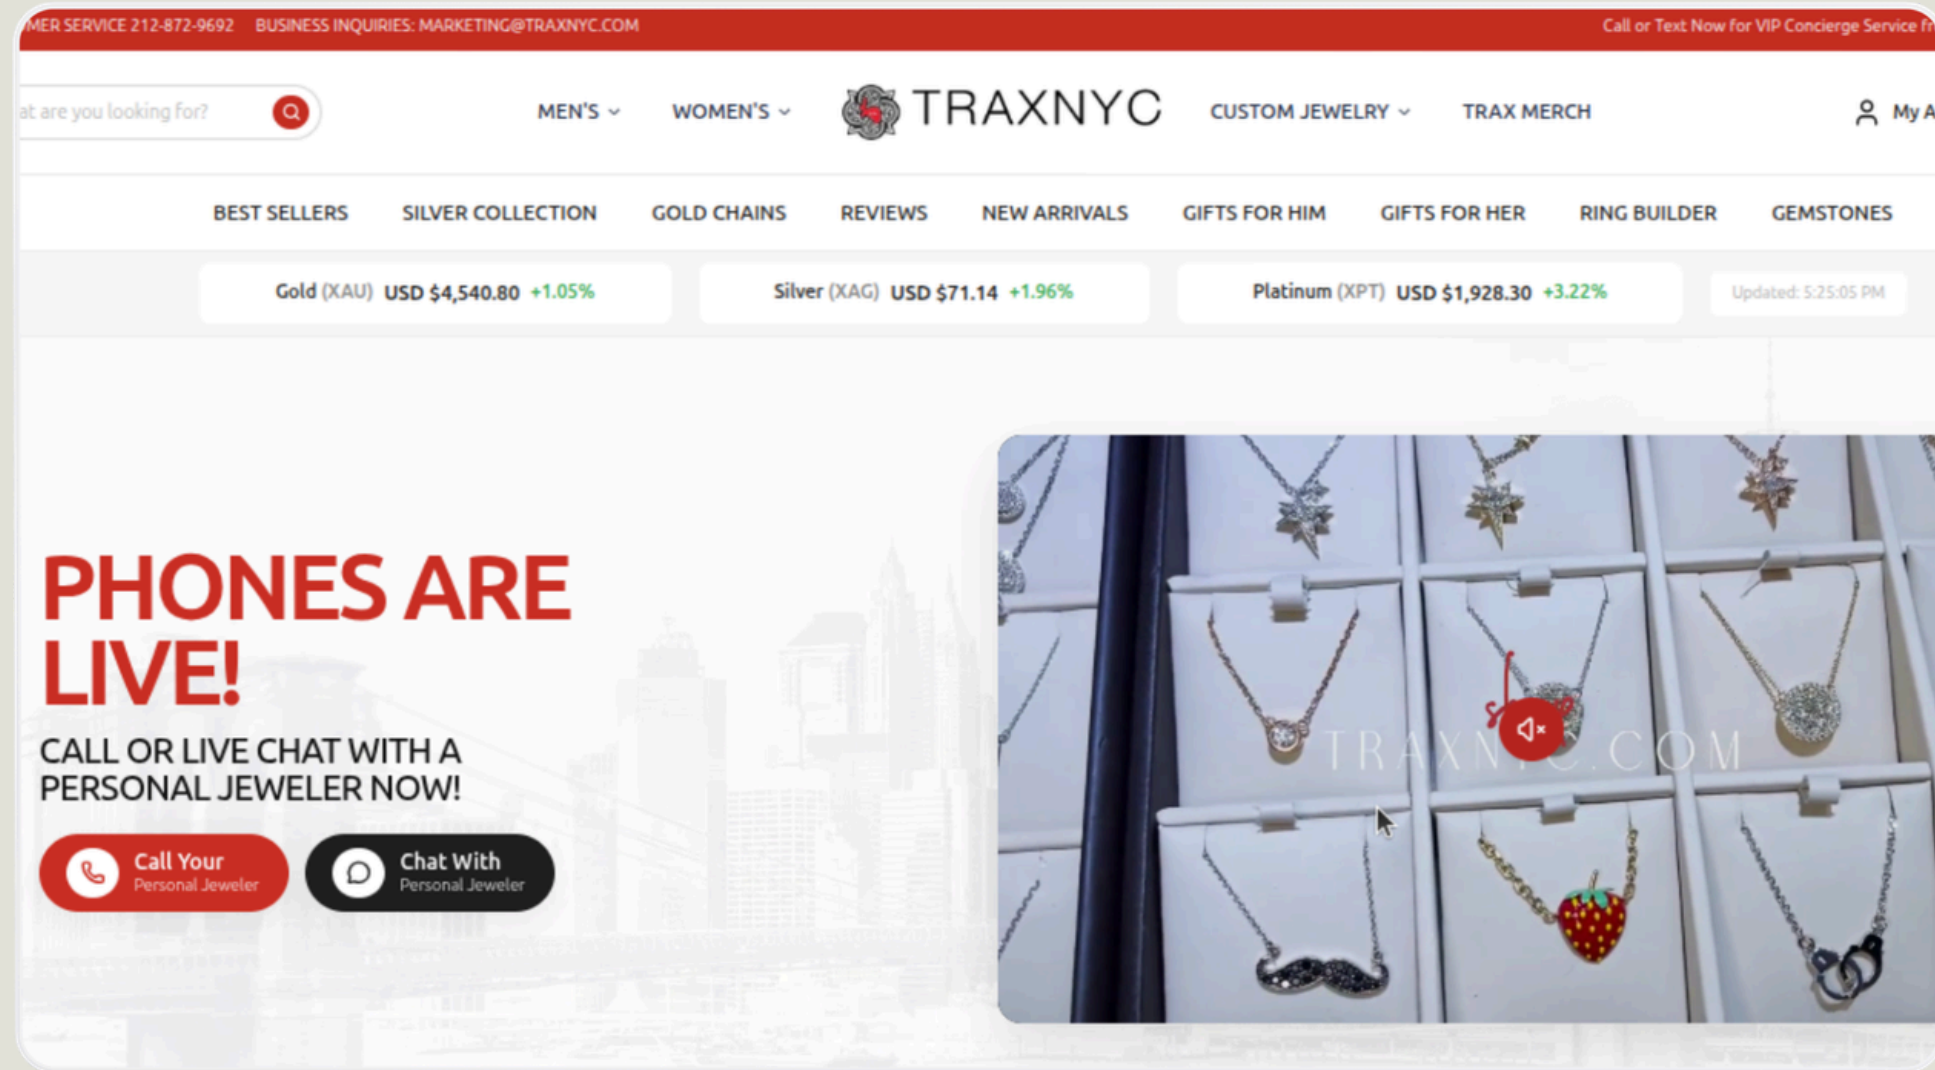

Real-time GPS tracking, digital ticketing and QR validation, multi-actor system design, fleet and route management dashboards, payment and wallet integration, geo-spatial routing and analytics, scalable backend architecture

Stack

- Go backend
- React + TypeScript frontend
- Flutter mobile apps
- PostgreSQL + PostGIS database
- Redis, RabbitMQ, WebSockets
- SSLCommerz integration

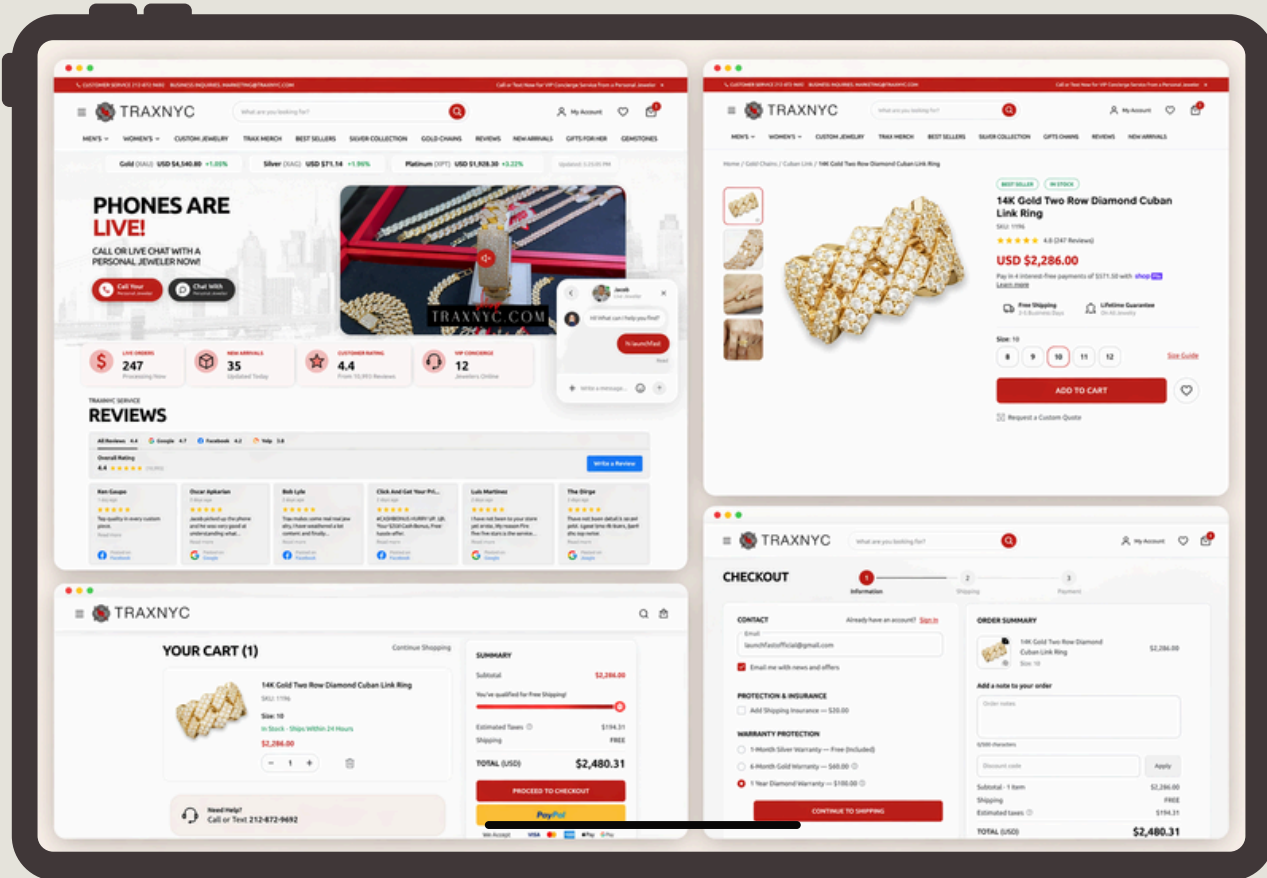

TraxNYC

A premium storefront backed by real-time operations, giving teams full control over products, orders, chat, and offers without engineering dependency, so they can move faster, convert better, and manage the business in one place.

Client

TraxNYC

Project

premium ecommerce platform

Date

2026

The brief

TraxNYC is a premium ecommerce platform built to combine high-end storefront experience with real operational control. Customers browse a polished, fast storefront with rich product presentation, while the backend enables teams to manage products, orders, live chat, and promotions without engineering dependency. It brings together merchandising, checkout, support, and offer flows into one seamless commerce system.

Services

- Full-stack ecommerce development
- High-performance storefront (Next.js)
- Admin dashboard and CMS systems
- Live chat and support workflows
- Custom checkout and offer systems

Stack

- Next.js + React frontend
- TypeScript
- Firebase Auth and Realtime Database
- Tailwind CSS, Framer Motion

X Engage Bot

X Engage Bot was built for brands that want consistent visibility on X without hiring a full-time social operator or building a custom backend. The system monitors mentions, finds relevant conversations, scores engagement opportunities with AI, and executes replies or lightweight actions on a schedule.

We build systems that give teams leverage, not just interfaces that look good in screenshots. This is the difference between surface-level execution and product-led agency work.

From Martinez, Startup Founder

"LaunchFast built our MVP in just 3 weeks. Their speed and technical expertise helped us secure seed funding. The React and Node.js stack they chose was perfect for our needs. They don't just ship screens — they build systems with a clear path from MVP to growth."

Our values

Ship lean, scale clean

Every system we build is designed to handle growth from the first user to millions — without a rewrite. We build production-grade from day one, not after the fact.

Business first, tech second

We think in business models, not page sections. Every technical decision traces back to a commercial outcome: lower CAC, higher retention, faster revenue, fewer bottlenecks.

Own the whole product

We take full responsibility from brief to deployment. No fragmented freelancers, no handoff gaps. One senior team owning the outcome end to end.

Have an idea or an existing product that needs to move faster?

Get a tailored quote and book a free 30-minute consult. We'll break down what's holding you back and map the fastest path to a production-ready system.
